

TOP 10 THINGS TO KNOW ABOUT

Trefinti Nematicide/Fungicide

1. Designed to do what no other turf product does. Trefinti® nematicide/fungicide, powered by TYMIRIUM® technology, is the only active ingredient intentionally designed and labeled to excel at controlling nematodes *and* root diseases.

2. Root-focused activity delivers results where problems start. Trefinti features strong root uptake and soil mobility, staying active where nematodes and root diseases thrive to provide consistent protection.

3. Broad-spectrum nematode control, including lance. Trefinti controls nematodes including lance, one of the most difficult species to manage, as well as sting, root-knot and *Anguina*. Targeted spot treatments maximize lance nematode control.

4. Fungicide performance that stands with the standards. Trefinti delivers a much-needed new tool with excellent control of spring dead spot, take-all root rot and mini ring—three of the most difficult bermudagrass diseases to manage.

5. Mitigates the nematode-disease complex. Nematode feeding is known to exacerbate take-all root rot and mini ring. Trefinti controls the nematodes behind that stress and adds fungicidal protection to help optimize root health.

6. Flexible rates for real-world conditions. Broadcast and spot treatment rates allow superintendents to tailor applications by area (fairway

vs. greens), targeting nematodes and diseases based on pressure, environmental conditions and budget.

7. Smart program approach. Trefinti can be rotated or tank-mixed with non-SDHI nematicides to treat high populations or surfaces with significant damage. Rotating Trefinti with Divanem® nematicide controls additional nematode species, including spiral and stubby root, while managing resistance.

8. Controls nematodes that cause recurring root diseases. When diseases like mini ring persist, underlying nematode activity is often involved. Trefinti controls disease symptoms and the nematode pressure driving them, helping improve long-term results.

9. Reduced Risk status with minimal PPE. Trefinti received EPA Reduced Risk status for turf and requires only basic PPE, with reentry once application has dried.

10. No fumigation or custom application. Unlike fumigants, Trefinti fits easily into standard spray programs—no sealing, tarping or specialized equipment required.
