## If you have a St. Augustinegrass or zoysiagrass lawn, keep reading!

There are few options available to control common weeds in St. Augustinegrass lawns, including nutsedges, kyllinga, dollarweed, clover and wild garlic.

Meanwhile, bermudagrass infestations in zoysiagrass have been equally troublesome, with no viable remedies—until now. **Now having weed-free St. Augustinegrass and zoysiagrass lawns is possible thanks to an innovative product we use called Recognition® herbicide.**

Yellow and Purple Nutsedge

Dollarweed

Clover

## What to expect

Unlike other treatments, with Recognition, your turf will stay green throughout the entire process. Meaning you can enjoy your beautiful lawn even while treating weeds.

Here's what to expect during your treatment process:

- Avoid mowing for one to two days before the first application
- A second application may be needed depending on weed species and size of weed
- Weeds show symptoms within a few days, and will die completely within one to four weeks
- Your lawn is rainfast three hours after the first application

Additionally, because it can be applied via a broadcast spray to your entire lawn, fewer applications are needed compared to making multiple spot treatments.

Talk to our team about a maintenance program that controls common weeds.

## Controlling unwanted bermudagrass is now possible

Recognition is a critical component in removing bermudagrass from St. Augustinegrass and zoysiagrass lawns, which has been challenging until now. Below is what you may see during the bermudagrass removal process:
