***PGR's: Trimmit® 2SC and/or Primo Maxx® plant growth regulators can be added to each application for improved putting surface quality, growth suppression and color. Rates will vary based on application frequency**.

Advisory: Turf parasitic nematodes can be a serious pest of putting greens. If your greens are not responding to normal maintenance practices, it may be beneficial to send soil samples to a qualified lab for nematode analysis. To control nematodes, Trefenti® nematicide at 3.8 oz per 10,000 sq. ft., for up to 4 applications. Severe pressure may require a program approach along with **Divanem®** nematicide at 1.2 oz per 1000 sq. ft., up to 4 applications. Apply with enough water and a soil wetting agent to move into root zone. See label for specific instructions.

Recommendations in this spray program are based on past knowledge and should only be used as a template for building individual spray programs. Spray programs should be altered when environmental conditions dictate.

For greens applications, a water carrier volume of 2.0 gallons per 1,000 ft^2 is recommended. Use a flat fan nozzle that provides thorough plant coverage.

If target is Fairy ring or Pythium root rot, all fungicide applications should be followed by at least 0.1" irrigation. For all other applications, irrigation can be delayed until end of day.
